

How to retrieve the factory default settings by using firmware upgrade for Vigor2130 Series?

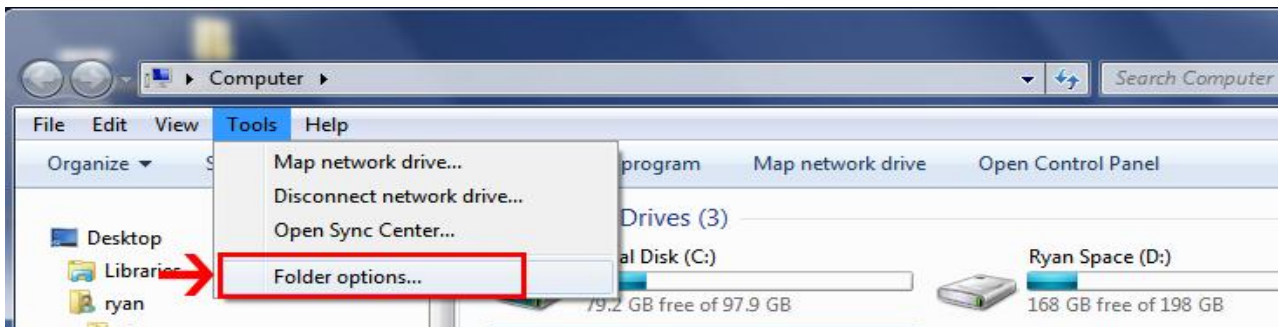

I. Using Hardware Reset Button

After finishing the firmware upgrade with 'XXX.all' file, the router will be ready for use with the signal of the ACT LED normal blinking. Please press **Factory Default** button on the rear side of the router for five seconds. Later, when the ACT LED blinks quickly, you can release the **Factory Rest** button. Now, the factory default settings of the router are retrieved.

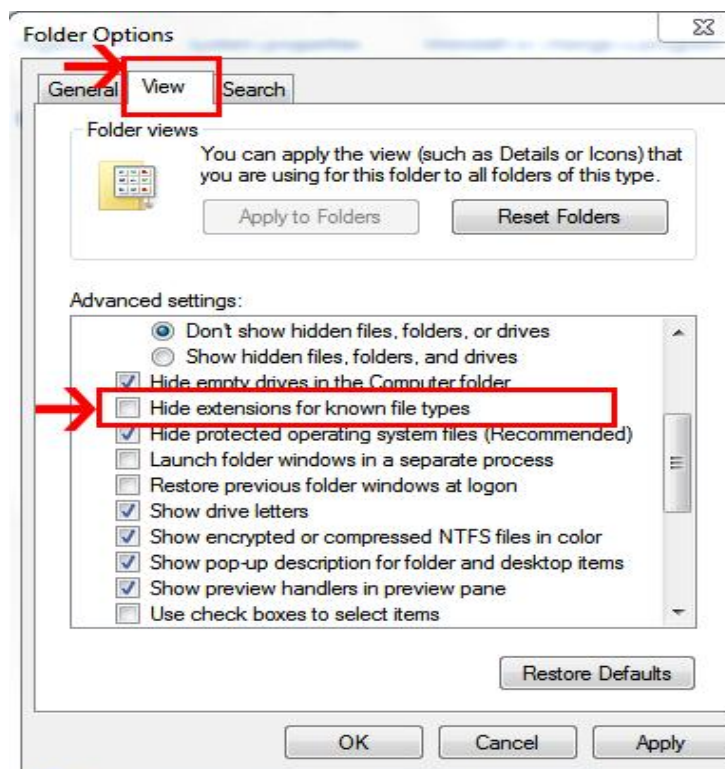

II. Using the firmware --- "XX.rst"

1. First, please open **Computer>> Tools** and choose **Folder options...**

2. Select the **View** tab and uncheck “**Hide extensions for known file types**”.

3. Locate the Vigor2130 folder. Change the file extension of the firmware from “*.all” into “*.rst”.

4. After modifying the firmware, please access into the web configurator of Vigor2130. Open **Firmware Update** page to carry out the firmware upgrading. When it is finished, the factory default settings of the router are retrieved.

Firmware Update

Current Firmware Version: V1.2.0

Select a firmware file.

Click Upgrade to upload the file.
